Block maintenance fertiliser nutrient recommendations

For: Current farm

Maintenance fertiliser nutrient recommendations to maintain soil tests at current levels

Block name	P	K	S	Ca	Mg	Na	Lime	Relative yield (%)
	(kg/ha/yr)							
irrigated isolation	31	0	9	0	0	0	40	92
Wairepo irrigated	31	0	9	0	0	0	40	92
QE2	5	0	0	4	0	11	30	67
dryland pasture	12	0	0	2	0	10	20	74
Block1								
Block2								

It is recommended that a fertiliser company representative or farm consultant with experience in nutrient management is consulted for advice on the types of fertiliser and on the timing of application of fertilisers.

These rates are to maintain soil test values only. If soil test values are above optimum, then less than maintenance can be applied to allow soil test values to fall. Conversely, if soil tests are below those required to maintain target pasture production levels, then capital dressings may be required. In both cases, it is recommended that a fertiliser company representative is consulted.

Also note that experienced fertiliser company representatives may advise rates that differ from these results based on local experience.

Block nitrogen report

For: Current farm

Block name	N in drainage * (ppm)	N leached	N surplus (kg N/ha/yr)	Added N **	% reduction in wetland
irrigated isolation	2.4	14	94	106	0
Wairepo irrigated	2.4	13	96	106	0
QE2	0.3	3	12	0	0
dryland pasture	1.3	4	16	3	0
Block1	na	23	231	100	0
Block2	na	32	47	70	0
Overall farm	na	10	62		

* Estimated N concentration in drainage water at the bottom of the root zone. Maximum recommended level for drinking water is 11.3 ppm (note that this is not an environmental water quality standard).

** Sum of fertiliser and external factory effluent inputs.

na : N in drainage not calculated for easy and steep blocks.

Block pasture report

For: Current farm

Block name	On-farm fresh pasture intake (kg DM/ha/yr)	Estimated utilisation (%)	Supplements removed (kg DM/ha/yr)	Pasture growth (kg DM/ha/yr)
irrigated isolation	7074	70	3078	13184
Wairepo irrigated	7074	70	3078	13184
QE2	742	60	133	1369
dryland pasture	2340	60	116	4017
Block1	2556	70	8	3659
Block2	0	70	0	0

This report gives an estimated animal intake for each block based on animal production and supplements brought on to farm information supplied. Estimated annual pasture growth is shown for the animal utilisation value shown.

Note: the model is not sensitive to changes in utilisation.

It is recommended that a consultant or software such as StockPol is used to estimate farm pasture production.
