

**BEFORE THE CANTERBURY REGIONAL COUNCIL**

**Under** the Resource Management Act 1991

**and**

**In the matter** of resource consent applications by various parties to take and use water in the Upper Waitaki Catchment

---

**MEMORANDUM TO COMMISSIONERS**

---

**Notice of Amendments to Applications – Waitangi Station Limited –  
Application No CRC030944 (Water Permit) and CRC031014 (S13 Works)**

1. As a result of further investigations and discussions with Investigating Officers, Waitangi Station Limited wishes to amend its intake structure on the Sutton Stream as part of CRC030944. Further consideration has been given to the buried intake proposed for Waitangi Station. On review of the suitability of the buried intake in this type of stream – especially to a depth of 2 metres below bed level it is no longer considered practical.
2. The applicant therefore wishes to amend the intake structure proposed. It is considered more appropriate to upgrade the current race intake to a slide gate that can control the inflow with a rotary fish screen located within the race.
3. This will result in less works being undertaken in the stream bed that was required for the original buried gallery intake.
4. The environmental effects of the amendment are therefore considered to be less than that contemplated by the buried gallery system.
5. There is no change proposed for CRC031013.
6. A standard fish screen condition in the form of WP09 is proposed for those intakes associated with a surface water take.
