

DEVAN HANDI-TANK

The Devan Handi-tank is our answer to your search for the all purpose utility storage tank. Designed to be extremely strong and versatile, the Handi-tank will meet the needs of a very wide range of applications.

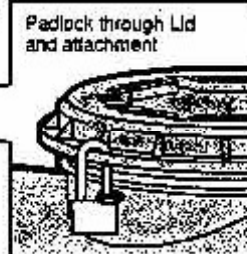

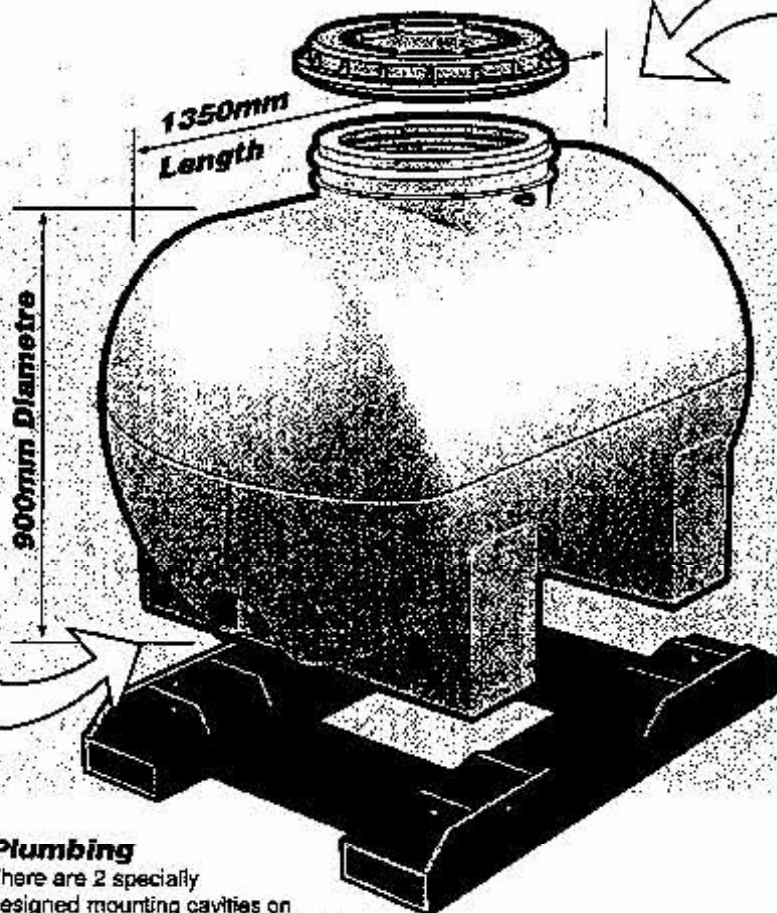

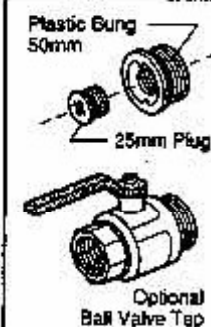

Its manufacturing process utilises the very latest techniques in computer controlled 'one-piece' rotational moulding technology; and because it has the right shape and the right size (750 litre capacity), the Handi-tank is

finding its way into many uses in the Food, Chemical, Agricultural and Liquid Recycling Industries. From molasses, sprays, hydraulic fluids or lubricants, you name it, the Handi-tank is ideal for its storage and transportation.

Devan Handi-tanks can also be custom-made to meet specialised requirements even on short runs.

Features

Our one-piece moulding process makes the Handi-tank extra strong and due to the design, its low centre of gravity makes it ideal as a liquid transport carrier. Its ultra smooth finish and large lid opening enables easy cleaning both inside and out. Handi-tanks can be manufactured to suit specific applications by modifying the grade and wall thickness of the material. Product identification through colour coding can be achieved either by tank material colour or by "Mould-in Graphics."

Screw-on Lid

The Handi-tank has a weather proof, easy access 500mm screw-on lid. A removable steel strainer or a fine aluminium mesh filter can be fitted between the opening and the lid to keep unwanted objects or debris from entering the tank. A padlock attachment is also provided making the lid lockable if required.

The Material

The Handi-tank is manufactured from the highest quality polyethylene. This internationally sourced material has been developed and tested in the world market place for many years and is ideally suited to our moulding technique. Polyethylene cannot rot or corrode and is ultra violet stabilized for harsh environmental conditions. It is available in a wide range of colours both opaque, or translucent enabling levels to be sighted from the outside.

Plumbing

There are 2 specially designed mounting cavities on either side of the tank, one of which has a moulded-in 2 inch BSP (50mm) brass fitting complete with matching

bung. This plastic bung also has in its centre a removable 1 inch BSP (25mm) plug for smaller diameter plumbing. The bung and the plug both utilise rubber O-rings for positive sealing. If specified, the Handi-tank can be fitted with a 2 inch BSP (50mm) threaded ball valve tap as an optional extra.

Forklift Pallet

An optional galvanised steel pallet is available for the Handi-tank for easy and safe handling during transport. Its lightweight yet tough rust-free design allows forklift access from all four sides.

Delivery

Handi-tanks can be dispatched after production within three working days. We have negotiated door-to-door courier delivery anywhere in the North Island for \$40 per unit. South Island courier price on request.

Manufactured by:

DEVAN PLASTICS

INCORPORATING PRACTICAL PLASTICS LTD

TAURANGA, NEW ZEALAND

At Devan Plastics, we are proud of our products and pledge to stand by our quality of manufacture.

Advantages

Perhaps the greatest advantage of the Devan Handi-tank besides its versatility is its cost. Because of the efficiencies attained in our manufacturing process, we can produce a 'standard spec' Handi-tank for as little as **\$495** including GST per unit (galvanised steel pallet not included).

But remember that our system allows for much greater versatility in meeting *exact customer requirements* even on short runs. This means you have the option to just as easily order a 'custom-specification' Handi-tank to suit a specialised application.

Mould-in Graphics

We can "mould-in" your company logo or any other graphic symbol on the tank. Because its application is part of the moulding process, these graphics are permanent. There are no seams to gather dirt and they will not crack or peel thereby ensuring the purpose, identification and ownership of your investment.
