Correct (at least while the B permit is being exercised) – so the Alford Park could not double dip and take twice as much water as it needs.

Subject: RE: Alford Park - B Permit

Hi Ben,

Thanks for sending this information to me. My interpretation of your proposing that the combined volume taken under this consent and the A permit (CRC950930.2) would be limited to 3,036,290 m3. Is that correct?

Cheers,

Gillian

Subject: Alford Park - B Permit

Annual volume for Alford Park and Pinelea calculated using Irricalc with reference to soil type (so a total annual volume of 3,036,290 m3), as set out below

Note the calculations remove the storage pond area (as it is effectively not irrigated)

Given Policy 4.50 of the LWRP, please assume that a combined annual volume as set out will be imposed on the B permit consent and apply to the total take of water.

We reserve our position with regard to making minor amendments to this through the application process (noting this calculation was a first cut).

Similarly this is being offered strictly in the context of the B permit application. Alford Park may continue to insist the A Permit consent not have its own annual volume through any separate application process re Intake D.
